

Unit A Spain	Title of the unit: Working with FMS (Flexible Manufacturing System) systems		
Prerequisites:	<ul style="list-style-type: none"> - Basic pneumatic systems - Basic knowledge of electricity - Basic knowledge about most common sensors (optical, inductive, capacitive, mechanical) 		
Work tasks:	<ul style="list-style-type: none"> - Assembly, programming and commissioning of a production module including SFC (Sequence Function Chart) programming with PLC. - Assembly, programming and commissioning of several production modules into a production line using I/O communication between modules. - Fault finding in a PLC-controlled production modules in order to replace broken components. - Using production stops in a production module programmed by SFC. - Applying general safety rules and writing a test report. 		
Learning Outcomes:	<p><i>Knowledge</i></p> <ul style="list-style-type: none"> - He/she knows how to define the basic processes using SFC (Sequential Function Chart) methods. - He/she knows how to recognise syntax of SFC-language according to IEC 61131-3. - He/she knows how to describe how to program the production modules. - He/she knows how to recognise electro technical symbols and knows in which norm to find them. - He/she knows how to recognise if a machine is working in proper conditions. - He/she knows how to describe the rules for writing a test report. - He/she knows how to describe the general safety rules. 	<p><i>Skills</i></p> <ul style="list-style-type: none"> - He/she is able to analyse the process that has to be controlled. - He/she is able to run through a PLC program, using a given SFC, and check if it works properly. - He/she is able to test the output condition and actuators - He/she is able to test the input condition and sensors. - He/she is able to decide if a component is broken or working properly. - He/she is able to use the program to monitor the process for fault finding. - He/she is able to check and measure the circuit using a wiring diagram. - He/she is able to evaluate the function of the different parts of the installation. - He/she is able to point out when a machine doesn't meet with certain safety standards - He/she is able to work in proper conditions, trying to avoid any kind of risk. 	<p><i>Competence</i></p> <ul style="list-style-type: none"> - He/she is responsible for applying IEC 61131-3 to create a PLC-program using SFC. - He/she is responsible for the correct functioning of the installation using the module's diagrams. - He/she is responsible for applying the right strategy to fix identified faults. - He/she is responsible for reflecting upon his/her actions in a test report. - He/she is responsible for applying general and specific branch related safety rules and procedures in his/her work. - He/she is responsible for sharing knowledge, experience and insights

				so that electro technical products and systems will be tested properly.

Reference to EQF:	Level 4*	Level 4*	Level 4*	Level 5*
ECVET points	N/A**			
Assessment:	Observations			

* The unit has been identified as part of the above mentioned national vocational qualifications and has by that been referenced to the same EQF level as the qualification.

** Further experimentation of the concept of ECVET points is required at European level before utilisation in practice.

Unit B the Netherlands	Title of the unit: Working with motor controllers		
Prerequisites:	<ul style="list-style-type: none"> - Basic knowledge about most common sensors (optical, inductive, capacitive, mechanical) - Basic principle of motors and generators - Working with 400V systems - Basic knowledge of using relays and contactors - Basic knowledge of electricity 		
Work tasks:	<ul style="list-style-type: none"> - Produce general scheme drawing of a production module using CAD systems - Assembly, programming and commissioning of a production module including Ladder programming with PLC and motor drivers. - Assembly, programming and commissioning of a production module including Sequence Ladder programming with PLC. - Using relays and contactors controlled by PLC in order to put the Y/D motor into service. - Applying general safety rules according to the low voltage directive - Working with frequency controllers - Using basic principles of measurement in a motor control circuit for fault finding 		
Learning Outcomes:	<i>Knowledge</i>	<i>Skills</i>	<i>Competence</i>
	<ul style="list-style-type: none"> - He/she knows how to define the basic processes using Ladder methods. - He/she knows how to recognise syntax of Ladder-language according to IEC 61131-3. - He/she knows how to describe how to program the production modules. 	<ul style="list-style-type: none"> - He/she is able to analyse the process that has to be controlled. - He/she is able to run through a PLC program, using a given Ladder, and check if it works properly. 	<ul style="list-style-type: none"> - He/she is responsible for applying IEC 61131-3 to create a PLC-program using Ladder.
	<ul style="list-style-type: none"> - He/she knows how to define the basic components of a frequency controller. - He/she knows how to define the basic parameters and connections of the motor. 	<ul style="list-style-type: none"> - He/she is able to connect a frequency controller to a motor. - He/she is able to connect input to start frequency controller. 	<ul style="list-style-type: none"> - He/she is responsible for applying the right combination of settings of the frequency controller with the parameters of the motors. - He/she is responsible for applying the correct wiring of Y/D motor with its contactors
	<ul style="list-style-type: none"> - He/she knows how to define the basic principles of a CAD systems. - He/she knows how to recognise electro technical symbols and knows how to use them. 	<ul style="list-style-type: none"> - He/she is able to produce a drawing using CAD. 	<ul style="list-style-type: none"> - He/she is responsible for creating a new up-to-date drawing when changes have been made.
	<ul style="list-style-type: none"> - He/she knows how to describe the general safety rules for the low voltage directive. 	<ul style="list-style-type: none"> - He/she is able to point out when a machine doesn't meet with certain safety standards - He/she is able to work in proper conditions, 	<ul style="list-style-type: none"> - He/she is responsible for applying general and specific branch related safety rules and procedures

		trying to avoid any kind of risk.	according to low voltage directives in his/her work.	
	- He/she knows how to explain the method of measuring the parameters of a motor controlled by a frequency controller.	- He/she is able to measure the current voltage and power of a motor controlled by a frequency controller.	- He/she is responsible for analysing the condition of the motor using the measuring results.	
			- He/she is responsible for sharing knowledge, experience and insights so that electro technical products and systems will be tested properly.
